

**Print Management  
Made Simple**

### **OCM Click Tracker Key Benefits:**

- ✓ Automated collection of device meter readings (total, print, copy, scan, colour and Mono)
- ✓ Automatic view and management of device status via central email alerts
- ✓ Management of toner usage and future forecast requirements
- ✓ Maximise the utilisation of IT and print administration staff
- ✓ Up to the minute device meter readings (generic management system)
- ✓ Management reports on toner/ consumable usage including forecast usage
- ✓ Central management of multiple locations
- ✓ Scalable for a site with one MFD or 100's of MFDs
- ✓ Central audit and device history reports.

## OCM Click Tracker

### **Client Print Fleet Management**

OCM International has long recognised the growing need for companies to accurately audit, manage and consolidate their entire fleet of print devices, to help reach that goal OCM developed OCM Click Tracker™.

OCM Click Tracker is a manufacturer independent solution which provides central management of an entire fleet of printers and multifunction devices providing you with the necessary tools and management information to reduce document output costs and offer the ability to consolidate print devices throughout your entire organisation.

In a world of spiraling printing costs, OCM Click Tracker will put control of your print out devices back into your hands. But that's not all; OCM Click Tracker provides accurate validation of the usage of all printers, photocopiers and multifunction devices throughout your organisation. You can use this information to re-deploy your office equipment to maximise its efficiency and implement a device consolidation strategy.

### **Automatic Device Discovery and Meter Reading**

When installed on your network OCM Click Tracker will automatically discover what printers and multifunction devices are on your network, once OCM Click Tracker detected all of your network attached devices it will automatically capture the device details including device manufacturer, model, serial number and meter readings. Once all of the data has been captured, the OCM Click Tracker scheduler will automatically email the captured data and output volumes to specific in house users, help centre or service provider.

### **Live Status and Device error alerts**

OCM Click Trackers central management console will alert your help centre or technical support service provider with error messages and information about the live status of your fleet of network attached devices, the status is automatically categorised into three priorities (high, medium or low) each priority alert can automatically be emailed to the appropriate support person or service centre allowing instantaneous response time to the alert generated, minimising device down time and increasing device utilisation.

**Print Management  
Made Simple**

# OCM Click Tracker

## **Create Instant Device Reports**

OCM Click Tracker's comprehensive device reports facility allows you to monitor a comprehensive range of print device trends – from quarterly reports covering your entire organisation to specific time periods for single machines. Its pinpoint accuracy puts you in control of your print volumes and device activity allowing you to accurately reconcile the device meter readings with that of the invoices from the print device supplier.

## **Detailed Error Alerts and Device History**

All device alerts and error information captured by Click Tracker are automatically archived allowing you to monitor device uptime, service provider response time and customer service levels.

## **Recovering Device Operational Costs**

Cost Centre's and individual budget holders across your organisation purchase printers, scanners, copiers and fax machines on a need to have basis. But that is just the initial out lay and the operational expense does not stop there. Typically the on-going costs to maintain individual devices are often transparent to the local budget holder with the IT and purchasing departments picking up the ongoing consumable and support costs. By implementing OCM Click Tracker the true ongoing operational costs can be identified, managed and where necessary charged back.

## **Device Consolidation Strategy**

Once OCM Click Tracker has been installed and operational, by reviewing the OCM device utilisation reports can assist you in consolidating your entire printer fleet. The consolidation data generated by OCM Click Tracker will also allow you to position the right output device in the right location to output the right applications and associated output volumes.

OCM Click Tracker is a part of a suite of products specifically designed to help consolidate, reduce cost and manage existing fleets of printers and multifunction devices.
